B.Tech – Artificial Intelligence & Machine Learning
Lovely Professional University, Punjab, India
Hyderabad, India | Immediate Joiner | Open to Global Relocation

Education

· B.Tech – Artificial Intelligence & Machine Learning *Aug 2022 – June 2026*
Lovely Professional University, Punjab, India Expected June 2026 | CGPA: 6.46/10.0

Research & Publication

· Multi-Stage Ensemble for Driver Fatigue Recognition — 96.8% Accuracy (2025)

- Managed structured datasets, wrote reproducible pipelines, and executed hyper-parameter search.
- Published results with clarity, emphasizing methodology, metrics, and experimental reproducibility.

Research Projects

· Product Recommendation Engine (RAG + Web Application Prototype)
Python, LangChain, FAISS, Streamlit, REST APIs

- Built services for semantic retrieval and integrated generation-based reasoning for product suggestions.
- Implemented scalable backend pipelines, embeddings storage, and query-time optimization.
- Designed interactive UI and feature-shipping workflow with iterative latency evaluation.

· Meme & Sentiment Classification System (Full-Stack ML Demo)
Python, Transformers, HuggingFace, Web UI

- Engineered multimodal processing for text+image inference; compared transformer variants for output quality.
- Built demo interface, introduced performance logging, and shipped improvements based on feedback.

· Covid-19 Predictive Analytics & Visualization Tool
Python, Pandas, scikit-learn, Matplotlib

- Developed time-series prediction models, evaluation scripts, and plotted analytical performance dashboards.
- Prepared structured reports, documented learnings, and improved model generalization through experiments.

Experience

· Data Engineer Intern
flickDONE (Y Combinator-backed) – Remote, India June – Aug 2025

- Built modular data pipelines, tested features, and contributed code reviewed by senior engineers.
- Improved system reliability through unit and regression testing; followed version-controlled dev cycles.
- Collaborated cross-functionally, wrote technical notes, communicated design choices and outcomes.

Technical Skills and Interests

Languages: Python (Strong), Java | C++ | TypeScript | SQL | Node.js
Web & System Development: REST APIs, backend architecture, server-side logic, SaaS-oriented builds
Cloud & DevOps Tools: Docker, Linux, Git/GitHub, GitHub Actions, CI/CD familiarity
Additional Exposure: AWS basics, distributed compute concepts, database indexing, caching
Core Strengths: Problem-solving, system thinking, software design fundamentals, debugging, documentation

Selected Achievements

- Winner — Hackathon 2025 (functional software shipped within strict constraints).
- Completed coursework in Software Engineering, Generative AI, and scalable system design.
- Delivered multiple deployed prototypes with clean documentation, testing, reliability focus.
- Enthusiastic about cloud-based SaaS engineering, scalable backend systems, financial technology, and high-impact product development.
