Hiring Manager
Hushh Bengaluru, Pune, or Mumbai (Remote/On-site)
Dear Hiring Manager,

I am excited to apply for the Data Engineer Intern position at Hushh, as advertised. As a third-year B.Tech student in Computer Science and Engineering at Lovely Professional University with a strong foundation in data engineering, AI/ML integration, and scalable systems, I am passionate about leveraging personal data to drive innovation and accessibility. Hushh's commitment to empowering individuals through AI/ML technologies resonates deeply with my experience in building data pipelines and optimizing models for real-world applications, and I am eager to contribute to your dynamic startup environment in the Hushh Garages.

In my recent Data Engineer Intern role at flickDone (June–August 2025), I built a Hindi–Bharati Braille parallel corpus of 50,000 sentence pairs, implementing automated data quality validation using Python scripts and visualization tools. This significantly improved verification efficiency while ensuring compliance with Braille Council of India standards. I collaborated with cross-functional teams to integrate a back-translation engine into AI/ML pipelines, performing data processing and optimization to enhance model performance and accessibility. These experiences align closely with Hushh's responsibilities in building scalable data pipelines for large datasets and optimizing AI/ML algorithms for mobile and web applications. My proficiency in Python, Java, and tools like FastAPI, Docker, and Kubernetes has equipped me to handle distributed systems and cloud platforms (AWS, GCP, Azure), while my familiarity with big data technologies from certifications in Python, Data Science & ML, and Generative AI with LLMs prepares me to experiment with Apache Spark, Hadoop, and SQL databases.

Additionally, my projects demonstrate hands-on expertise in AI/ML frameworks. In the Generative AI Product Recommender System (June–August 2025), I engineered a full-stack platform using React, TypeScript, FastAPI, FAISS, and LLMs to enable semantic search and intelligent recommendations, focusing on scalability and user experience. My research publication on a Multi-Stage Ensemble for Driver Fatigue Recognition (IEEE, 2025), achieving 96.8% accuracy, involved developing reproducible ML pipelines with evaluation workflows emphasizing scalability and data security—skills directly relevant to Hushh's emphasis on data privacy best practices and collaborative innovation. As a Hackathon 2025 winner, I thrive in fast-paced environments, delivering deployed prototypes with clean documentation and reliability focus, and I am committed to continuous learning in data technologies.

I am enthusiastic about the opportunity to bring my problem-solving abilities, teamwork skills, and technical expertise to Hushh, contributing to your mission of transforming personal data. I would welcome the chance to discuss how my background can support your team's goals. Thank you for considering my application. I look forward to the possibility of speaking with you soon.

Sincerely,
Jyothir Raghavalu Bhogi
