EDUCATION

Lovely Professional University
Bachelor of Technology (Computer Science and Engineering)

Jalandhar, India
July 2022 - May 2026

SKILLS SUMMARY

- **Programming:** Python, OOP, Data Structures and Algorithms
- **Frameworks:** PyTorch, Transformers, LangChain, Hugging Face, Pandas, NumPy
- **AI & ML:** Generative AI, LLMs, NLP, Deep Learning, Prompt Engineering, Model Fine-tuning, Model Evaluation
- **APIs & Tools:** OpenAI API, Cohere API, REST APIs, API Integration
- **DevOps:** Docker, Git, CI/CD Pipelines
- **Methodologies:** Agile, Experiment Documentation, Reproducible Workflows
- **Soft Skills:** Analytical Thinking, Cross-functional Collaboration, Problem-Solving, Prototyping

WORK EXPERIENCE

DATA ENGINEER INTERN | flickDONE | [LINK](#)

June 25- August 25

- Optimized Python pipelines processing 50,000+ daily records, improving backend reliability by 30%.
- Engineered SQL schema improvements and indexing strategies, reducing query latency significantly.
- Developed automated data validation scripts ensuring end-to-end integrity and correctness across all processing workflows.
- Collaborated cross-functionally, applying analytical thinking to prototype and deploy scalable Generative AI solutions.
- Implemented structured CI/CD automation using Docker and Git ensuring stable, monitored, iterative production deployments.

PROJECTS

Generative AI Product Recommender System | [LINK](#)

June 25- August 2025

- Built scalable Python recommender system integrating LangChain and LLM APIs for product recommendations.
- Designed and prototyped prompt engineering pipelines using OpenAI API, improving recommendation accuracy significantly.
- Fine-tuned open-source LLMs via Hugging Face, building chatbot interfaces and summarization pipelines.
- Implemented Docker-based CI/CD pipelines reducing deployment response time and improving production reliability.

Rails TODO App | [LINK](#)

September 24- November 2024

- Developed full-stack task management application using Python OOP and REST APIs with modular Git-managed workflows.
- Implemented CRUD operations, authentication, and data validation ensuring accurate and reproducible reliable outputs.
- Optimized SQL query performance through systematic debugging, analytical thinking, and modular documentation practices.
- Ensured scalable Agile architecture supporting cross-functional collaboration, API integration, and modular extensibility.

Morning Market Brief | [LINK](#)

June 24- August 2024

- Developed cloud-based Python analytics platform generating AI-driven financial insights via OpenAI and REST APIs.
- Built structured ETL pipelines using Python, SQL, and Pandas to preprocess and validate financial datasets efficiently.
- Implemented REST API integration and data validation strategies ensuring accurate and reproducible outputs.
- Integrated Docker CI/CD pipelines improving platform response time and overall system availability significantly.

RESEARCH AND PUBLICATIONS

Multi-Stage Ensemble for Driver Fatigue Recognition | IEEE, 2025

- Developed PyTorch-based ensemble deep learning pipeline achieving 92% accuracy for real-world driver fatigue detection.
- Improved preprocessing efficiency using Hugging Face and NumPy feature extraction, reducing computation by 20%.
- Applied LLM experimentation, hyperparameter tuning, and reproducible workflows for consistent model performance.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | [CERTIFICATE](#)

August 2024

- Mastered Python fundamentals including OOP, data structures, algorithms, and functions applied to AI automation workflows.
- Applied machine learning algorithms, feature engineering, and model evaluation strategies on real-world datasets.

Generative AI with LLMs (Coursera) | [CERTIFICATE](#)

March 2024

- Learned transformer architecture, prompt engineering, and core principles powering Large Language Model applications.
- Built and prototyped Generative AI applications using GPT and LLaMA models for text summarization.
